

Moving forward

Summary

- BHAS is working to align the work on waste statistics with the waste indicators in the EU context
- BHAS has good data on municipal solid waste generation and collection which is collected from reporting units
- However, reporting units struggle to provide disaggregated information on the volume of waste from specific sources by type of waste and waste collection and disposal by type
- There are some discrepancies in terms of the data related to recycling between the different stakeholders
- Data on hazardous waste and chemicals is under development

Wish list

- If you could create a wish list of data that you would need in order to be fully compliant with the methodology on hazardous waste and recycling, what would be needed in your view:
 - Composition/sorting studies?
 - More information from treatment facilities?
 - Tracking of waste flows from pre-treatment operation to pre-treatment operation?
 - Harmonization of data on packaging waste?
 - Other?
- In your view, which topics are most important and how could these be best communicated with policy makers?

Next steps

- Finalization and further consultation of the Chemicals and Waste statistics review document
- Add additional information on chemicals which can provide a better basis for reporting on the different conventions
 - Having a Basel convention focal point in place will help
- Identify key messages in the Chemicals and Waste statistics review document which can be used to engage policy makers

National Action Plan

- Based on the discussion from yesterday, what are some of the key elements that can go into a national action plan:
 - Write down two actions on a piece of paper.

National Action Plan

Prioritize the list of actions from the pieces of paper.

- Which actions are feasible?**
- What is the timeline for these actions?**
- What is missing?**

Advocacy

Split into two groups: Each group write down:

- A message on why data on hazardous waste and chemicals is important**
- A message on the key e-waste messages**
- A message on the recycling rate**

(messages which can be used as the justification for the National Action Plan)

The end
